BrakeQuip Programs

Add new customers and more profits to your business

OE Rubber Brake Hose Program

Can replicate most OE brake and clutch hoses using OE design fittings that comply with DOT standards – usually while the customer waits. Hoses can be made for any type of vehicle with hydraulic brakes – from motorcycles to industrial equipment.

Stainless Steel Braided Brake Hose Program

Choose from TWO Styles – OE Style fitting or Low Profile Fitting! Can replicate most OE brake and clutch hoses with stainless braided hose that complies with DOT standards – usually while the customer waits.

Metal Tube Program

Duplicate any automotive metal tube instantly and profitably using the BrakeQuip EziBend tube and the BrakeQuip high speed flaring tool. Tubes can be made while the customer waits.

Power Steering Program

Repair automotive power steering hoses using the highest OEM quality hose available. Choose braze on or compression fittings and hoses that incorporate noise resistant technology.

Fuel Line Program

Repair or replace fuel lines for virtually all vehicles in minutes. No special tools required.

BrakeQuip Tool Program

BrakeQuip offers a range of unique speciality tools that are highly productive for the automotive plumbing professional.

Specialty Fitting Program

The one stop shop for automotive fittings including metric and hard to get fittings. Custom made fittings available. A full range of assortment kits makes sure you have your fitting on hand.

DID YOU KNOW?

Some flared tube style fittings are deliberately made longer to make them more universal. This enables you to bend the tube to the desired shape and allows you plenty of room to place the BQ23 test spade under the nut for testing.

DID YOU KNOW?

It is impossible to stock every fitting. That is why BrakeQuip supplies lifesavers to fill in the gaps. Currently BrakeQuip offers five different lifesavers to suit different fitting situations. This makes it easy and efficient for you to reuse the original fitting. The HF01 & HF26 are virtually the same and are designed for most standard fittings. However these have a tubing

countersunk in them so that you can easily braze tube directly to them to make up custom fittings. The HF27 is designed to suit all the fittings that have a 5/16" (8mm) tube attached to it. The HF120 is designed to reuse all banjo fittings that have 7mm shank such as the HFB09. The HF05 is designed to reuse all center support fittings.

DID YOU KNOW?

BrakeQuip makes the round style banjo fittings that only have one bend in a straight form to allow you to easily bend the banjo shank to the desired shape. You can usually bend these banjo fittings up to 90° by using the available banjo bending tools.

CAUTION

Illustrations shown in this reference guide may vary slightly in detail from actual parts due to manufacturer's tolerances and design differences. Note: Illustrations not to scale.

DISCLAIMER NOTICE

The illustrations and data contained in this illustrated reference guide are intended as an aid in identifying the various products and have been obtained and developed from the specifications and information available. Although BrakeQuip believes that such illustrations and data are correct, errors may exist and further verification on the part of the user may be necessary.

DID YOU KNOW?

Copper washers or brake fluid compatible bonded washers should only be used for sealing the high pressures found in braking systems. Aluminum and nylon washers are for low pressure only and should not be used on braking systems.

DID YOU KNOW?

It is important to match a banjo bolt to the correct banjo fitting. If the banjo fitting hole is "scalloped" out then it doesn't matter if the banjo bolt has a groove at the inlet port. The fluid flow can be restricted if you use a banjo bolt that does not have a relief at the outlet port into a banjo fitting that does not have a recessed hole.

CAUTION

DID YOU KNOW?

Some banjo fittings have the banjo hole offset from the center as a locator on the caliper. By reducing the offset amount from the opposite side also allows the banjo hole to be in the center and able to fit both sides instead of just one side only.

DID YOU KNOW?

Some female fittings were designed with locating and directional profiles to enable the novice installer to route the hose correctly. This meant having both left hand and right hand fittings. BrakeQuip designs these fittings with a locating profile only, which then makes this fitting able to fit both sides of the vehicle.

DID YOU KNOW?

Have you noticed all the different profiles in particular on female fittings between the retaining clip groove and the mounting shoulder? You will find this corresponding shape in the chassis or bracket where the fitting mounts. This is designed so that the hose is routed with the correct orientation. It is very important to note this orientation when assembling brake hoses. It is particularly important to make note of the orientation before you cut off any fitting you are going to reclaim with our lifesaver. Once you cut it off you have lost your orientation reference.

Some typical examples.

DID YOU KNOW?

Manufacturers design their fittings to suit resources available to them. For instance, some manufacturers make their female fittings with a 3/4" hex to give them a shoulder to mount to, but others prefer to make them from 5/8" hex and then supply a shoulder clip for the shoulder to mount to. BrakeQuip supplies these in both styles. Therefore the following applies.
 HFIF01 = HFIF36, HFIF02 = HFIF24,
 HFIF05 = HFIF45 and vice versa.

DID YOU KNOW?

Most female fittings with a bulkhead mount use a 5/8" x 18NF thread, and this is the only thread that BQ supplies. However some of these fittings come with a M16 x 1.5 or a fine brass thread. If in doubt, supply a BQ13 nut with the fitting.

Bolt On Mount

DID YOU KNOW?

There are three different flare types.

1. A 45° double flare – the inverted seat angle is 42°
2. A 45° ISO flare (Bubble) – the female seat angle is 96°
3. A 31° DIN flare (Mushroom) – the female seat angle is 120°

The seat angles vary to the tube angle because it is important to seal the smallest diameter to get an effective seal.

DID YOU KNOW?

Most female fittings with a bulkhead mount use a 5/8" x 18NF thread, and this is the only thread that BQ supplies. However some of these fittings come with a M16 x 1.5 or a fine brass thread. If in doubt, supply a BQ13 nut with the fitting.

BQ71

Bracket Retaining Screws

(PKT 50)

This thread forming screw is required to secure bracket to bracket mount fittings.

DID YOU KNOW?

The purpose of the circular groove on the fitting crimp shell is threefold.

1. It helps to differentiate BQ fittings from others.
2. It acts as a depth guide for the hose installation.
3. It is used as a crimp setting guide for the economy crimping systems.

Rubber Brake Hose

BQ101

Hose ID: .130" - .138"
(3.3mm - 3.5mm)

Hose OD: .406" - .421"
(10.3mm - 10.7mm)

- Two braid PVA reinforced hose
 - Meets FMVSS-106 and SAE J1401 specifications
 - Temperature range -50°C to 121°C
 - Compatible with DOT 3, DOT 4 and most non-petroleum based brake fluids including silicone
 - Excellent moisture resistance
 - Superior weather resistant cover material
- (50' Minimum)

BQ11

Hose Protector Spring
(PKT 6 - Length 16")

BQ12

Fitting Shoulder Clips
(PKT 20)

Heat Protection Sleeve

Attractive brake hose cover to protect the hose from hot components. Simply slide over hose before crimping end fittings.

TOOLS

BQ2104

Small Braided Hose Shears

High grade braided hose shears that cuts the hose clean without fraying the braid. Handy inside stops are ideal for rounding up the hose after cutting.

BQ611

BQ611B

Replacement Blade

High Speed Skiving Tool

Skive your braided hose in a matter of a few seconds. Adjustable stop allows precise measurement every time. This tool has three actions with one simple squeeze of the handles. The first stage clamps the hose, the second stage brings the knives down and cuts the outer cover, and the final stage rips it off the hose. This high productivity tool will save you a lot of time and heartache and leave you with a professional result.

Power Steering Components - Hoses

High Pressure

BQ330

ID SIZE	OD SIZE	WORKING PRESSURE	MIN. BURST PRESSURE	MIN. BEND RADIUS
3/8"	18mm	1,639 psi	8,700 psi	3-1/4"

Temperature Range: -40°F to +275°F (-40°C to +135°C)

This hose has a high temperature rating and is compatible with most power steering oils. High expansion for noise resistance. Complies with SAE J2050 standards.

Low Pressure

BQ331

ID SIZE	OD SIZE	WORKING PRESSURE	MIN. BURST PRESSURE	MIN. BEND RADIUS
3/8"	16.25mm	300 psi	1,200 psi	3"

Temperature Range: -40°F to +300°F (-40°C to +150°C)

This hose has a high temperature rating and is compatible with most power steering oils. Fabric cover to distinguish it and for flexibility. Complies with SAE J1019 standards.

Power Steering Hose Fabrication Instructions

Fitting Selection

Male Lifesaver – PSHF105 – Designed for when you need to reuse a non-tube style fitting. The fitting to be reused will need to be countersunk between 1/8" to 3/16" (3 - 5mm) deep with a 11mm or 7/16" drill.

Female Lifesavers – PSHF101 (3/8") and PSHF102 (10mm) – designed for when you don't have enough room to use a compression fitting. These fittings are already countersunk. It is just a matter of cutting the existing tube at the maximum length possible and installing it into the appropriately selected fitting and brazing the tube to the fitting.

IMPORTANT: The brazing process must take place before crimping the fitting.

Note: It is important that only high pressure silver brazing rods be used. The silver content of the brazing rod must be at least 45%.

Compression Fittings – PSHF103 (3/8") & PSHF104 (10mm) – Designed for when you have sufficient straight tube to get a good seal on these types of fittings. See illustration below for correct assembly.

Note: It is important that the cut tube is deburred with a slight outside chamfer so that it doesn't damage the sealing O-Ring. Make sure that the tube goes past the O-Ring and bottoms out at the bottom of the fitting.

Swivel Fitting – PSHF106 – Designed for an easier installation and flexible orientation. Simply braze a BQ226 (3/8" tube) or a BQ227 (10mm tube) fitting onto the end of the cut tube. This will then give you a male connection to attach to the No. 6 JIC female swivel fitting.

Restrictor Tube - BQ801 - This is used only where applicable. Insert restrictor tube into hose before installing last end fitting. This special high temperature tube will "float" in the hose and restrict flow to reduce noise.

POWER STEERING PROGRAM

Power Steering Components - Accessories

Crimp Setting Tools
For power steering hoses.

Power Steering Adaptor Kit

Flow Restrictor
This flow restrictor is mainly used on smaller cars and in particular Asian & European vehicles. Its purpose is to restrict flow to eliminate power steering noise.

SYSTEM AIDS & ACCESSORIES

Test Cones

BQ21

BQ21 Test Cone is designed as an aid for testing banjo fittings.

BQ206

BQ206 and BQ206H are universal Test Cones for doing most general applications.

BQ206H

BQ207

BQ207 and BQ207H Test Cones are designed for testing female fittings with inverted seats.

BQ207H

BQ206S

BQ206HS

BQ206S and BQ206HS Test Cones are designed for testing female swivel fittings and female fittings with a drill point seat (DPS).

BQ208

BQ208 and BQ208H Test Cone are designed for testing extra long fittings.

BQ208H

BQ1020

Banjo Blocking-Off Tool

A professional tool for blocking-off banjo fittings. Ideal for blocking off brake hoses with banjo fittings during maintenance & trouble shooting. Copper Washer sealing surfaces allows for sealing high pressures. Easy to use & reliable. Fits banjos holes 3/8" to 5/8". Use lubrication on O-Rings.

Fitting Plugs

The ideal fitting for blanking off high pressure fluid ports. Fitting design has a universal seat so no sealing compounds necessary.

FEATURES:

- Zinc plated for corrosion resistance
- Imperial & Metric Threads

Assortment kit available.

To order see Part No.

BQ7012.

PART NO.	DESCRIPTION	THREAD	A	B
BQ18	Male Plug	M10 x 1	5mm	10mm
BQ19	Male Plug	3/8" x 24NF	3/16"	10mm
BQ26	Male Plug	7/16" x 24NS	1/4"	11mm

BQ166	Female Plug	M12 x 1	16mm	16mm
BQ167	Female Plug	M12 x 1.5	16mm	16mm

BQ35

Calibration Tool

Please call for instruction if Potentiometer is out of adjustment. For BQ1005 series machine.

BQ1022

Fitting Pressure Test Adaptor

Ideal for pre-testing reworked fittings.

BQ22A

*Part A - Banjo Bending Bar

BQ22B

Part B - Banjo Holder

BQ22C

*Banjo Bending Bar - LP

*Use in conjunction with BQ22B.

BQ2110

Crimp Setting Tool - LP

BQ2033

Angle Gauge

Can be bench mounted. Ideal for aligning tubes and fittings.

BQ2696-R3

NEW

Hose Assembly Lubricant

If you want less effort when installing the fitting into the hose or sick of constriction problems - this is the answer for you.

BQ1150 Grease Gun

BQ1415 Grease Gun Adaptor

This grease gun setup is designed for lubricating the BQ1005 series machine.

Identifying the Correct Thread

THREAD FACTS

Worldwide there are only two measuring systems - Metric and Imperial. Sometimes the imperial measurement is called SAE or American.

Metric systems measure the thread by the distance between two thread pitches expressed in millimeters. Example: M10 x 1 = The OD of the thread is 10mm and the distance between each thread pitch is 1mm. Imperial systems measure the number of thread pitches over a one inch length.

Example: 7/16" x 24NS = The OD of the thread is 7/16" and the number of thread pitches over a one inch length is 24.

After some experience of looking at threads and knowing what vehicle the fitting came from, you will be able to determine fitting threads by just looking at them.

Determining if the thread is Metric or Imperial

The easiest way is using a thread gauge. We offer a thread identification kit (BQ2100) for this purpose that covers the majority of threads you will encounter working with brake plumbing. Another method could be to use a brake hose fitting or tube nut from which you could confirm the thread and size.

1. Determining the fitting OD

- a. If a male fitting - Measure the OD of the thread. Take into account that this measurement will be slightly under the nominal size.
- b. If a female fitting - Measure the ID of the thread. Compare this measurement at the distance between the "valleys" of opposing pitches with corresponding male fittings.

2. Determining the thread pitch

- a. If it is an imperial size - Count the number of thread pitches over, say, 1/2" length and then multiply by 2 to get your T.P.I. (Threads Per Inch).

A GLOBAL GUIDE TO THREAD SELECTION	
European (excluding UK)	99% Metric
Asian	99% Metric
UK (1930 - 1976)	Imperial
UK (1976-2008)	Metric
USA (1930 - 1980)	Imperial
USA (1980 - 2008)	Metric & Imperial

- b. If it is a metric size - Measure the distance between two thread pitches to determine the thread pitch.

Imperial threads found on braking systems

3/8" x 24NF 7/16" x 24NS 9/16" x 20NS
 3/8" x 20BSF 1/2" x 20NF
 7/16" x 20NF 9/16" x 18NF

Metric threads found on braking systems

M9 x 1 M10 x 1.5 M12 x 1.25
 M10 x 1 M11 x 1.25 M12 x 1.5
 M10 x 1.25 M12 x 1 M14 x 1.5

80% of threads found on braking systems are:

3/8" x 24NF
 7/16" x 24NS
 M10 x 1

The two sizes most confused because they are so close in dimension are:

- a. 3/8" & 10mm. A 3/8" x 24NF thread will screw in to a M10x1 but a M10x1 will not start into a 3/8" thread. If uncertain, always go for the M10x1 to see if it will start in the thread.
- b. 7/16" & 11mm. The 11mm thread is extremely rare so always going for the 7/16" thread first is a safe bet.

NOTE

It is possible to have metric on one end and imperial on the other end of the hose.

The metric pitch is the same for all sizes, so if you don't have the exact one you want, you can determine this pitch by selecting a different size metric gauge.

ABBREVIATIONS
NF = National Fine
NS = National Special
BSF = British Standard Fine

TIPS ON USING THE BQ2100 THREAD GAUGE

Gauges are organized into popularity groups:

- Blue = Most popular Metric threads
- Red = Most popular Imperial threads
- Gold = Less popular Metric threads
- Green = Less popular Imperial threads

Identify Fittings in 60 Seconds or Less

One of the biggest time wasters is time spent identifying the fittings. BrakeQuip has designed a system around the fitting catalog so that you can identify a fitting in seconds once you have identified the thread, if applicable. The first thing you need to do is understand the fitting numbering system.

For crimp style fittings, BrakeQuip has 9 different product groups and all start with HF (Hose Fitting). Usually if it is not a crimp fitting, the part number will start with BQ (BrakeQuip).

Follow these steps for systemizing this quick find process:

1. Decide which fitting group the fitting falls under.
2. Select the fitting style or the way it is mounted. Use the Fitting Catalog contents section at the front of the catalog until you get familiar with catalog.
3. This narrows your search down to a couple of pages or less. Identify what is unique about the fitting and focus on this point in the Catalog.
4. Confirm your selection by checking that all the important attributes match the fitting you are seeking.

Note: To search electronically - go to www.brakequip.com - products - brake hose fittings.

Hose Fitting Numbering System

HF = Hose Fitting (These two letters are used for computer number finding only.)
Fittings that don't fall into one of the categories below have the prefix HF only.

NOTE:

Not all fittings look the same as the original but will still function properly. The three important points that you need to consider are:

- A. Can the fitting be secured properly? Is there a mount or shoulder profile that will clash?
- B. Will the working end at the connection match up and seal?
- C. Does the hose need something to direct it away from rubbing or heat?

Understanding The Code
